The TissueCare Concept:

**A new definition of
tissue stability**

We hereby confirm, that

Nico Küffner

has participated at the following course:

DENTSPLY Friadent

Join the TissueCare Concept

on October 19th, 2007 in Munich

Dr. Eduard Eisenmann
Director Clinical Research and Education

This Workshop took place according to the guidelines and evaluation of BZÄK/DGZMK and was valued with 7 scores.

The **ANKYLOS**® implant system from DENTSPLY Friadent is known for long-term high-end esthetics. The unique TissueCare Connection with its influence on the retention of the structure of hard and soft tissue, the system-inherent Platform-Switching, the microroughness of the implant shoulder, and the option of subcrestal placement redefines the requirement for tissue stability and bone retention. For more information on the five success factors for initial and permanent tissue stability see www.tissuecareconcept.com
